## Chair's Column

This time last year, early 2023, the voting members of the AWG were actively working to complete the incredibly difficult task of selecting a GSSP to mark the base of the Anthropocene, a critical component of the attempt to seek formalization of the Anthropocene as a geological time unit. After three rounds of voting, core from Crawford Lake received supermajority support, as required by ICS statutes. Consequently, the AWG proposal was for an Anthropocene epoch/series and Crawfordian age/stage. Having resolved this task, voting members turned to selecting candidate Standard Auxiliary Boundary Stratotypes (SABSSs). Newly introduced in 2023 by ICS as a requirement, we were fortunate that Martin Head was the lead author on the significance of, and procedures for, proposing SABSSs and was able to guide us through selection of three candidate sites, Beppu Bay, Sihailongwan Lake and Śnieżka Peatland, with the remaining eight sites as reference sections. Following the binding vote on selection of Crawford Lake as the proposed site for the GSSP, a new core had been collected in order to carry out annual resolution analysis of the primary marker ( $^{239+240}\text{Pu}$ ) and some secondary markers. This dataset providing exceptional resolution of the onset of the Pu bomb-spike and further binding votes were required to select the new core and propose the preferred precise position of the GSSP. There was very strong support to select the base of the organic lamina in the varve level equivalent to 1952 CE (predominantly deposited in the autumn), the varve in which the initial major increase in  $^{239+240}\text{Pu}$  is recorded. Subsequently, it was formally agreed in a final vote that in addition to the GSSP, it was recommended that if required, a notional start of the Crawfordian age and Anthropocene epoch could be aligned with the detonation of the first thermonuclear device (the Ivy Mike detonation) which occurred on 1 November 1952 at 07:15 local time (19:15 on 31 October, GMT) and hence broadly coincident with the elevated Pu signal in the GSSP. Full details of all of the votes carried out from late 2022 to beginning of 2024 are recorded later in this Newsletter. I wish to acknowledge the great dedication of the voting members during such a demanding process to address these series of complex votes with the great consideration required given the magnitude of their decisions.

Armed with the results of the selection of Crawford Lake it was possible to announce the AWG decision at the 4<sup>th</sup> International Congress on Stratigraphy STRATI 2023 at Lille on the 11<sup>th</sup> July. In a session on "*The Anthropocene: stratigraphical concepts and evidence*" there were four presentations by: Colin Waters et al. on the stratigraphic enrichment of proxies during the Anthropocene; Francine McCarthy et al. on the Crawford Lake GSSP candidate; Michael Wagreich et al. on the urban Anthropocene of Karlsplatz, Vienna; and Colin Waters et al. on the understanding of 'event stratigraphy' in the context of the Anthropocene. Having agreed to requests from ICS not to announce the results of our voting to the media in advance of STRATI 2023, a joint online press conference with the Max Planck Society (MPS) was held independently of the congress on the evening of the 11<sup>th</sup> July as part of the MPS *Sustainable Anthropocene* conference, with presentations by Jürgen Renn (Director MPI for the History of Science and Founding Director MPI of Geoanthropology), Bernd Scherer (Former Director of Haus der Kulturen der Welt (HKW), Katrin Klingan (Former Head of the Department Literature and Humanities, HKW), Colin Waters, Simon Turner, Francine McCarthy and Martin Head. It was an opportunity to celebrate the role of HKW in securing the funding that made the analysis of the 12 sites possible. Georg Schäfer is particularly thanked for his patience in coordinating the event given the very fluid nature of the plans.

Following the Congress, ICS President imposed without discussion a deadline to get the AWG submission completed by the 29<sup>th</sup> September 2023, which on complaint by AWG was extended to 31<sup>st</sup> October 2023. AWG members then worked tirelessly to ensure compilation of the report, which had to be written in parallel with continued rounds of voting and data analysis. Ultimately, the submission went to SQS at 23.45 pm on the 31<sup>st</sup> October, and comprised an executive summary, part 1 report (and appendices) detailing the evidence for the Anthropocene

as a candidate series/epoch and part 2 report on the GSSP and SABSS proposals (and appendices for the reference sections). It is our intention to make this complete submission available online in the near future, but at time of writing the Executive Summary is accessible at EarthArXiv at: <https://eartharxiv.github.io/moderation.html>. As has been the case throughout the life of the AWG, we value the importance of the evidence of our work being openly available to scrutiny.

As one now expects from AWG members, this Newsletter records the phenomenal output of publications and media outreach over the year. Plaudits to Francine for working tirelessly to promote the cause of Crawford Lake as the candidate GSSP and the amazing efforts of Team Crawford to further refine the data for the site. It is a worthy candidate. The compilation of the results of the analytical work of the 12 initial candidate sites, as published in a special thematic set of papers in Anthropocene Review, volume 10, provides a comprehensive assessment of the evidence for the Anthropocene across five continents and eight distinct environmental settings.

As we come towards the end of the life of the AWG (as a working group of the SQS at least), it is time to reflect on the early days of inception of the group in 2009. Only four members of the original group persisted through to the very end: An Zhisheng, Davor Vidas, Mark Williams and Jan Zalasiewicz. I would like to show my appreciation for their determination over the years. Mark did a wonderful job in being the original Secretary, helped coordinate the very influential 2011 Geological Society of London (GSL) meeting and has been a leading light in developing the group's biostratigraphical analysis and formidable presenter at conferences. But, without Jan none of this would have happened. He led that first tentative exploration of the Anthropocene by the GSL Stratigraphy Commission that ultimately inspired the inception of the group and during his time as Chair (from 2009 to 2020), and his phenomenal output of publications at the forefront of investigations into the concept have truly shaped how we view our impact upon the planet.

At the time of writing it would appear that our worthy submission to SQS was rejected, though we only found out via a leak in the New York Times and the SQS vote moderators have still not contacted us with the results or provided explanation of the basis by which it was rejected. This is an unacceptable way for the AWG members, who had worked for 15 years on behalf of SQS, to be treated. A catalogue of complaints about unethical behaviour by those in high-office over the past decade who have aimed at preventing fair assessment of any proposal had been compiled and submitted to an independent IUGS Geoethics Commission at the beginning of this year before voting commenced. Their reasonable assessment of a suitable schedule for ensuring a fair vote was largely ignored by IUGS in the haste of seeing the vote completed, aided by ICS clearly breaching their own statutes and rules. The full story will eventually be told, but is not for here and now. Certainly, the media have been greatly interested in understanding how SQS could possibly have come to their conclusion. The number of interviews by AWG members over the last few weeks are not included in the list provided later in this Newsletter.

Finally, it is with great sadness that we have lost another of the great influencers within the AWG with the passing of Peter Haff on 3<sup>rd</sup> February, almost exactly one year on from the loss of Will Steffen. Despite not being an active contributor to the stratigraphic decision-making process of selecting a GSSP, he was very much an important influence on the development of the thinking of the group with his challenging concept of an evolving technosphere and his ability to assess issues through a somewhat different, but always perceptive, perspective was always valued. The following obituary expresses the sadness in losing our colleague and supportive contributor to our group's activities.

Colin Waters  
Chair, Anthropocene Working Group  
16<sup>th</sup> March 2024

## In celebration of Peter Haff – scholar, mentor, and friend

Peter K. Haff, a distinguished professor emeritus of the geosciences at Duke University and long-serving member of the Anthropocene Working Group, passed away on 3 February 2024 in Chapel Hill, North Carolina USA.

Born in Boulder, Colorado, and graduating from high school as valedictorian in Alexandria, Virginia, Haff received his BA from Harvard in 1966 and his PhD from the University of Virginia in 1970, both in Physics. For nearly 15 years, Haff worked as a Caltech scientist, exploring particle physics, specifically of granular flows and “particle sputtering”, i.e., the ejection of small particles from the surface of solids following the impact of energetic particles of a plasma or gas. Haff produced a remarkable body of work on particle sputtering on the surface of the Moon and Jupiter’s Io, the erosion of atmospheres surrounding Mars and Ganymede, and even with Saturn’s spectacular E ring (a problem Haff liked to call “the enigmas of Enceladus”). During this period, Haff became captivated by the Mojave and Death Valley; deserts would become one of his most enduring interests.

Moving with his family Suzanne, Tonya, and Jesse to Duke in 1988, Haff held joint appointments in the Pratt School of Engineering and the Nicholas School of the Environment. His leadership was marked by his tenure as Chair of the Earth and Ocean Sciences Division from 2001 to 2007. Haff was elected in 2016 as a fellow of the American Geophysical Union, a testament to his positive impact on his field and his peers. Election as an AGU Fellow is an honor reserved for individuals who have made exceptional scientific contributions.

It can be said that Haff grew to advocate a principle of scientific trespass, a principle first proposed by geologist G.K. Gilbert and one that requires not only enormous intellectual ability but also courage. According to Haff’s close friend, David Furbish of Vanderbilt, “Peter was intellectually fearless. In pursuing his work, nothing was *a priori* off the table.” Another

colleague and former Duke dean, William Schlesinger, credits Haff's pioneering work in geomorphology, particularly in our understanding of wind-blown movement of sand grains and the formation and dynamics of sand dunes. Haff's special mix of humor and modesty comes alive in a story from Furbish who once heaped praised on Haff for his mathematical formulation of what continues to be widely cited in physics as Haff's Cooling Law. Peter replied, no doubt in his own reserved manner, "Well.... it's not like it's one of Newton's laws; it's more like a Darcy's law or a Fick's law, after all. At most it's a physics law-let."

While Haff's early career was marked by investigations of natural phenomena, his incessant intellectual curiosity led him to explore the interactions of human activities with Earth systems writ large. Haff embraced the concept of the Anthropocene Epoch, and is credited with originating the concept of the Earth system's newest sphere, the technosphere, that he considered to overlap with Earth's biosphere, hydrosphere, lithosphere, pedosphere, and atmosphere. As a member of the AWG, Haff produced a number of papers exploring how the technosphere has assumed its own agency, a major departure from conventional ways of conceiving of agency centered in human beings.

In Haff's near decade of retirement, he continued to come to Duke's campus to write, share a coffee or lunch, give away books, and to interact with colleagues and students. Haff was an active participant in Bruno Latour's three-day field and campus visit to Duke in 2015 and in Duke's scholarly celebration of Alexander von Humboldt's 250<sup>th</sup> birthday anniversary in 2019 and 2020. Haff deeply appreciated von Humboldt's descriptions of the joy and delight that is liberated when solving scientific problems.

In some circles, Haff will be remembered by a verb that was coined in his honor. "To Peterhaff it" means to approximate the solution to a quantitative problem to within the correct order of magnitude. "How many bricks are on the new Pratt Engineering Building?", Peter once asked. Haff was concerned about overparameterization of models and about teaching students only high-level mathematics. How special and ironic that the physicist who gave us a Cooling Law, thought it so important to help students estimate solutions to problems to within a factor of ten, to Peterhaff it!

Duke flags on campus were lowered February 14 in Haff's honor.

Dan Richter, Durham, NC

## Voting record from late 2022 to early 2024

### 2022 binding vote on selection of rank for proposed Anthropocene chronostratigraphic unit

No. of potential voting members: 23

No. required to be quorate (60%): 14

No. of votes received: 23 (100% of voting membership).

Round 1 (concluded 17th December 2022):

Epoch/series and corresponding stage: 22

votes (95.7%)

Stage alone: 1 vote (4.3%)

Other rank: 0 votes

Abstentions: 0

### 2022/2023 binding vote on selection of GSSP candidate

No. of potential voting members: 23

No. required to be quorate (60%): 14

No. of votes received: 23 (100% of voting membership).

Round 1 (concluded 17th December 2022):

Crawford Lake: 11 votes (47.8%)

Sihailongwan Lake: 5 votes (21.7%)

Beppu Bay: 4 votes (17.4%)

Searsville Lake: 3 votes (13.0%)

All other sites :0

Abstentions: 0

Round 2 (concluded 20th February 2023):

Crawford Lake: 11 votes (47.8%)

Sihailongwan Lake: 8 votes (34.8%)

Beppu Bay: 3 votes (13.0%)

Abstentions: 1 (4.3%)

Round 3 (concluded 19th April 2023):

Crawford Lake 14 votes (60.9%)

Sihailongwan Lake 7 votes (30.4%)

Abstentions 2 (8.7%)

Hence, the proposal is for an Anthropocene epoch/series and Crawfordian age/stage.

### 2023 binding vote on selection of candidate Standard Auxiliary Boundary Stratotypes (SABs)

No. of potential voting members: 22

No. required to be quorate (60%): 13

No. of votes received: 21 (95% of voting membership).

Peer-review of the published data for the 12 candidate sites determined three sites should be considered reference sections: Ernesto Cave (Italy), Karlsplatz (Vienna) and San Francisco Estuary (USA). A non-binding vote was undertaken (completed on 4<sup>th</sup> July 2023) with 19 members voting, to determine relative support for remaining sites. The candidates with least support, East Gotland Basin (Baltic Sea), Flinders Reef (Australia) and Palmer ice core (Antarctica) were excluded from the SABs vote and were considered to represent reference sections. The remaining five sites then were included in a formal vote.

Round 1 (concluded on 6 <sup>th</sup> August 2023)	Beppu Bay, Japan 20 votes (95.2%)
	Sihailongwan Lake, China 19 votes (90.5%)
	Śnieżka Peatland, Poland 16 votes (76.2%)
	Searsville Lake, USA 12 votes (57.1%)
	West Flower Garden Bank, USA 9 votes 42.9%)
	No vote 1
	Abstentions 0

Hence, Beppu Bay, Sihailongwan Lake and Śnieżka Peatland all achieved greater than 60% support to be proposed as SABSSs for the GSSP. Searsville Lake and West Flower Garden Bank Reef are included as reference sites.

**2023 binding vote on the level (year) of the GSSP in the Crawford Lake core**

No. of potential voting members: 22  
 No. required to be quorate (60%): 13  
 No. of votes received: 22 (100% of voting membership).

Following the binding vote on selection of Crawford Lake as the proposed site for the GSSP, a new core had been collected in order to carry out annual resolution analysis of the primary marker ( $^{239+240}\text{Pu}$ ) and some secondary markers. Given that the Crawford Lake submission voted on by AWG members was on an earlier core and proposing 1950 CE as the level of the GSSP in that core (as outlined by McCarthy *et al.*, 2023), it was necessary to confirm this in a binding vote. The results of the vote were concluded on 18<sup>th</sup> October 2023.

*Q1. Can the preferred core from Crawford Lake be revised from CRA22-1FRA-3, as published in the original proposal McCarthy *et al.* (2023) in the Anthropocene Review Special Publication and selected by vote by the AWG, to the new core CRA23-BC-1F-A with annual-resolution Pu data?*

Yes, 21 votes (95%)  
 No, 0 votes (0%)  
 Abstentions, 1 (5%)

*Q2. What is your preferred level for the proposed Global boundary Stratotype Section and Point (GSSP) in the Crawford Lake core?*

1950 CE<sup>1</sup>, 4 votes (18%)  
 1952 CE<sup>2</sup>, 18 votes (82%)

<sup>1</sup> Specifically, at the base of the calcite lamina in the varve level equivalent to 1950 CE, fixed at a convenient date close to a lithological boundary evident in the core and consistent with the common understanding of the onset of the Great Acceleration. For practical purposes to be taken as 1<sup>st</sup> January 1950 CE.

<sup>2</sup> Specifically to be taken at the base of the organic lamina in the varve level equivalent to 1952 CE, the varve in which the initial major increase in  $^{239+240}\text{Pu}$  is recorded. For practical purposes to be taken midpoint between the two adjacent annual samples that show the biggest proportional increase within the run of samples that all have detectable Pu. At Crawford Lake this definition coincides in core CRA23-BC-1F-A with the Fall (October-December) 1952 CE closely coincident with the first thermonuclear detonation on 1<sup>st</sup> November 1952 CE. This option is conditional on selected 'YES' for question 1.

Hence, the Crawford Lake core CRA23-BC-1F-A has been selected as the host for the proposed GSSP, which is specifically taken in this core at the initial major increase in  $^{239+240}\text{Pu}$  coincident with the boundary between the lower calcite and upper organic component of the varve level equivalent to 1952 CE at a depth of 16.2 cm.

**2023/2024 binding vote on nominal start time for the Anthropocene epoch/Crawfordian age**

No. of potential voting members: 22

No. required to be quorate (60%): 13

No. of votes received: 22 (100% of voting membership).

*Q1. Can the preferred core from Crawford Lake be revised from CRA23-BC-1F-A (for which all material had been consumed during analysis) to the alternative CRA23-BC-1F-B which contributed Pu data to the annual analysis and for which intact core is preserved, as published in McCarthy et al. (submitted) in the Anthropocene Review? The boundary will continue to be taken at the base of the organic lamina in the varve level equivalent to 1952 CE, the varve in which the initial major increase in  $^{239+240}\text{Pu}$  is recorded.*

Yes, 21 votes (95%)

No, 0 votes (0%)

Abstentions, 1 (5%)

*Q2. Can a notional start of the proposed Crawfordian age/Anthropocene epoch be proposed at a specific date and time. Options are: a) 00.00 GMT 1 January 1952; b) 1st November 1952 coincident with detonation of first thermonuclear device, augmenting the proposed Global boundary Stratotype Section and Point (GSSP) in the Crawford Lake core present at the boundary between summer and fall 1952 CE varves? The Ivy Mike detonation occurred on 1 November 1952 at 07:15 local time (19:15 on 31 October, GMT); or c) 00.00 GMT 1 January 1953. Please select only one option.*

a) 1<sup>st</sup> January 1952, 1 vote (5%)

b) 1<sup>st</sup> November 1952, 19 votes (86%)

c) 1<sup>st</sup> January 1953, 1 vote (5%)

d) Abstentions, 1 (5%)

## MULTI-AUTHOR AWG PUBLICATIONS (2023)

Head, M.J., Waters, C.N., Zalasiewicz, J.A., Barnosky, A.D., Turner, S.D., Cearreta, A., Leinfelder, R., McCarthy, F.M.G., Richter, D. de B., Rose, N.L., Saito, Y., Vidas, D., Wagreich, M., Han, Y., Summerhayes, C.P., Williams, M., & Zinke, J. ## **REPORTS BY OTHER INTERNATIONAL BODIES**

The IPCC Sixth Assessment Report (AR6) Synthesis Report released on 20<sup>th</sup> March 2023.  
<https://www.ipcc.ch/ar6-syr/>

The OECD is making Anthropocene the framing for the Pisa 2025 multinational school test. This must be considered a massive breakthrough and mainstreaming of the concept.

<https://pisa-framework.oecd.org/science-2025/>

The PISA 2025 assessment measures how well countries are preparing their students with an understanding of science and how science produces reliable knowledge. This is crucial for citizens who need to make informed personal decisions about science-related phenomena such as health and the environment to engage in action within their families, local communities, and wider societies. It is particularly important in the 21st century when humanity faces an uncertain future as it enters the Anthropocene, an era in which human impact is significantly changing Earth's systems. A knowledge of science then matters at the individual, regional and global levels as we seek to address these impacts. The environmental science competencies to be measured in PISA 2025 relate to the environmental-related outcomes of students' science education, defined as 'Agency in the Anthropocene'

(Source: Sverker Sörlin, Umeå University).

# CONFERENCES/LECTURES

*Presentations by AWG members over 2023, (alphabetically by AWG author):*

## Alejandro Cearreta

Date	Conference/Meeting Title	Organisation/Venue
09.02. 2023	Invited Conference “Antropoceno geológico: No sólo clima y biodiversidad”	Ateneo Guipuzcoano, Donostia-San Sebastián, Spain
23-28.04. 2023	Li, T.; García-Artola, A.; Walker, J.; Cearreta, A. & Horton, B., The importance of underestimated local vertical land motion component in sea-level projections: A case study from the Oka estuary, northern Spain	European Geosciences Union General Assembly 2023, Vienna, Austria
05.06. 2023	Invited Conference “Cambio Climático: La trayectoria del Antropoceno y (un poco) más allá”	Basque Environment and Ocean Week 2023, Bilbao, Spain
15.06. 2023	Invited Conference “Antropoceno: Geosfera+Tecnosfera”	5th Summer Course Guggenheim Bilbao Museoa: Modelos artísticos para el sistema Tierra, Bilbao, Spain
26-30.06. 2023	Gardoki, J.; García-Artola, A.; Cearreta, A.; Irabien, M.J.; Gómez-Arozamena, J.; Villasante-Marcos, V.; Galaz-Samaniego, C. & Bessa, F., Modern environmental conditions on an agriculture-impacted estuary (Mondego, N Portugal): a foraminiferal approach	FORAMS 2023 International Symposium on Foraminifera, Perugia, Italy
11-20.07. 2023	Li, T.; García-Artola, A.; Walker, J.; Cearreta, A. & Horton, B., Using paleo sea-level data and GIA models to reveal vertical land motion signal: Implications for local sea-level projections	28th International Union of Geodesy and Geophysics General Assembly (IUGG2023), Berlin, Germany
14-20.07. 2023	Li, T.; García-Artola, A.; Walker, J.; Cearreta, A. & Horton, B., Underestimated vertical land motion component in sea-level projection – a case study from the Oka estuary, northern Spain	XXI INQUA Congress. Time for Change, Roma, Italy
16-20.07. 2023	Gardoqui, J.; Cearreta, A.; Irabien, M.J.; Gómez-Arozamena, J. & Villasante-Marcos, V.; García-Artola, A.; Galaz-Samaniego, C.; Peñalba, C. & Bessa, F., Anthropogenic impacts on intertidal sediments from the inner Ría of Ferrol: Current and historical perspectives	XI Congresso Nacional de Geologia. Geociências e Desafios Globais, Coimbra, Portugal.

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
17- 22.09. 2023	Sáez-Muñoz, M.; Gómez-Arozamena, J.; Cearreta, A.; Ortiz, J. & Martorell, S., Anthropocene dating by radionuclide analysis of estuarine sediments from northern Spain	ENVIRA 2023-7th International Conference on Environmental Radioactivity, Sevilla, Spain
20.10. 2023	Invited Conference “¿Por qué vivimos en el Antropoceno?”	Official Opening ceremony of the 2023-24 Academic Course at the Miguel de Unamuno Residence Hall of the UPV/EHU, Bilbao, Spain
11- 15.12. 2023	García-Artola, A.; Li, T.; Shaw, T.A.; Peng, D.; Walker, J.S.; Cearreta, A. & Horton, B., Vertical land motion component is underestimated in sea-level projections from northern Spain	American Geophysical Union AGU 2023, San Francisco (USA)

### Ian Fairchild

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
Jan 2023	“Defining the Anthropocene”	Malvern U3A, UK
April 2023	Sedgwick Club Symposium: “The Anthropocene and the Underworld	Earth Sciences, University of Cambridge

### Reinhold Leinfelder

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
14.03. 2023	Leinfelder, R. Ernährung im Anthrozän - Essen wir die Erde auf. Online Lecture Series, The Anthropocene, <a href="https://anthropocene.univie.ac.at/fileadmin/user_upload/p_anthropocene/Events/RV2023_Anthropocene_Abstracts.pdf">https://anthropocene.univie.ac.at/fileadmin/user_upload/p_anthropocene/Events/RV2023_Anthropocene_Abstracts.pdf</a> p.8-11, Video-recording: <a href="https://vimeo.com/809059157/">https://vimeo.com/809059157/</a>	Department of Geology & Vienna Anthropocene Network, 1. European Climate and Environmental Education Centre/Hohe Tauern National Park (Carinthia) & Forum Anthropocene).
April – June 2023	Leinfelder, R., Lebenswelten der Kinder. Lecture course for the educational goal: Anthropocene: Human-nature-culture relationship as a task for the future	University College of Teacher Education Lower Austria, see <a href="https://www.ph-noe.ac.at/de/curriculum/studienjahre/leinfelder-jahr">https://www.ph-noe.ac.at/de/curriculum/studienjahre/leinfelder-jahr</a>
16- 20.07. 2023	Leinfelder, R., The Anthropocene – from Earth System Analysis and Sedimentology to Futures Literacy (Invited Keynote-Talk)	XI Congresso Nacional de Geologia, Universidade de Coimbra, Portugal, XI CNG 2023 – Livro de Resumos, p. 7 (or <a href="https://xicng.net/reinhold-leinfelder/">https://xicng.net/reinhold-leinfelder/</a> )
14.09. 2023	Leinfelder, R., Über(s)leben im Anthrozän - Notwendigkeiten, Herausforderungen und Chancen in Zeiten des Wandel	Online event on the annual theme of 'surviving in times of change', Catholic adult education in the diocese of Trier in cooperation with the University for Social Design, Koblenz; youtube-recording: <a href="https://www.youtube.com/watch?v=eynhiq75CnQ">https://www.youtube.com/watch?v=eynhiq75CnQ</a>

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
19.10. 2023	Leinfelder,R., CultureNature Literacy als integratives Bildungskonzept für das Anthropozän, Invited Keynote	Multiplier Event of the Erasmus project CultureNature Literacy, "CultureNature Literacy: Cultural Sustainability as a Transformative Educational Concept" at Ludwig-Maximilians-Universität Munich
23.10 2023	Leinfelder, R., Energie und Ökologie im Anthropozän,	Lecture series on environmental studies - energy and ecology. University of Augsburg (Environmental Science Centre and Institute of Geography) / Bavarian State Office for the Environment, (Programm <a href="https://www.lfu.bayern.de/veranstaltungen/vortragsreihen/doc/vortragsreihen.pdf">https://www.lfu.bayern.de/veranstaltungen/vortragsreihen/doc/vortragsreihen.pdf</a> )

### **Francine McCarthy**

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
11.07. 2023	McCarthy, F.M.G., Patterson, R.T., Head, M.J., et al. (2023). Signature of the Great Acceleration in the varved succession at Crawford Lake, Milton, Ontario, Canada: implications for the Anthropocene as a series/ epoch.	Strati2023, Lille, France, July 11-14, 2023.
14-20, 07. 2023	Patterson, R.T., McCarthy, F.M.G., Head, M.J., et al. (2023) The Anthropocene record preserved in the annually laminated succession of Crawford Lake, Ontario, Canada.	INQUA Congress, Rome, Italy, July 14-20.
18.08. 2023	Meeting with members of Canadian Parliament MPs Pam Damoff & Adam Van Koeverden	Crawford Lake, Canada
03.10. 2023	"Crawford Lake and the Anthropocene" Panel Discussion	Currelly Legacy Society, Royal Ontario Museum
16.10. 2023	McCarthy, F.M.G. (2023) <a href="#">Why propose a GSSP for the Anthropocene in a freeze core from Crawford Lake, Canada? Invited presentation.</a>	Geological Society of America Annual Meeting, Pittsburgh, PA, USA Oct. 16-20, 2023.
19.10. 2023	Why propose a GSSP for the Anthropocene in a freeze core from Crawford Lake, Canada? What's so special about this lake??? Guest Lecture	Union College, Schenectady, NY
20.10. 2023	"Is the end of the Holocene Epoch recorded in a freeze core from Crawford Lake, Canada?" Guest Lecture	University of Massachusetts, Amherst, MA.
04.11. 2023	McCarthy, F.M.G. (2023) Are we living in the Anthropocene? Humans permanently altered our planet. It's time to act.	TEDx Manhattan Beach, CA, USA November 4, 2023 <a href="https://youtu.be/Y1YhXFAXWkA?si=aElZoX_zICD8Cifj">https://youtu.be/Y1YhXFAXWkA?si=aElZoX_zICD8Cifj</a>

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
23.11. 2023	"Are we now living in the Anthropocene?"	Niagara Falls Museum, Niagara Falls, Ontario
29.11. 2023	"Is the beginning of the Anthropocene in a freeze core from Crawford Lake, Canada?" Guest Lecture	Geological Survey of Canada-Atlantic Science Hour.
08.12. 2023	"Do sediments from Crawford Lake record a human-induced planetary shift?" Keynote Speaker	McMaster University Faculty of Science Graduate Symposium.
29.01. 2024	"The boundless significance of a small Canadian Lake." Guest Lecture	Georgetown University, Washington DC

### **John McNeill**

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
25.02 .2023	"The Anthropocene,"	University of Scranton
23.08 .2023	"The Great Acceleration and Will Steffen,"	European Society for Environmental History meetings, Bern, Switzerland
12.10 .2023	"The Anthropocene,"	Illinois State Conservation Department

### **Barbara Fiałkiewicz-Kozieł**

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
4- 7.02. 2023	Depozycja markerów antropocenu w torfowiskach górskich	PAKT dla mokradeł, Warszawa, 4-7.02.2023
17.03 .2023	Jak pęd ku nowoczesności przyczynił się do powstania nowej epoki czyli teoria antropocenu	Różne oblicza geografii (Different faces of Geography) – meeting with secondary school students
17.03 .2023	Jak pęd ku nowoczesności przyczynił się do powstania nowej epoki czyli teoria antropocenu	Różne oblicza geografii (Different faces of Geography) – meeting with secondary school students
13- 21.07 .2023	Eurasian peatlands as valuable deposits of the synchronous Anthropocene Signal	INQUA Congress, Rome, Italy, July 14-20.
13- 21.07 .2023	The Śnieżka peatland as a candidate for the Global Boundary Stratotype Section and Point for the Anthropocene Series	INQUA Congress, Rome, Italy, July 14-20.

### **Agnieszka Gałuszka**

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
11.09 .2023	Inauguration lecture: Human–environment relationship in the geological Anthropocene (presented in Polish).	XXXVI Maria Dudzikowa Summer School of Young Pedagogues, Kielce (Poland)

### **Yoshi Saito**

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
29.06 .2023	The Seventh Biennial Conference of East Asian Environmental History (EAEH,2023) "Asian deltas/estuaries and the Anthropocene"	Association for East Asian Environmental History, and others / IBS, Daejeon, Korea
29.06 .2023	The Seventh Biennial Conference of East Asian Environmental History (EAEH2023) "GSSPs and the Anthropocene: Present status"	Association for East Asian Environmental History, and others / IBS, KAIST, Daejeon, Korea

### **Colin Summerhayes**

<b>Date</b>	<b>Conference/Meeting Title</b>	<b>Organisation/Venue</b>
13.04 .2023	"Sea Level Change through the Phanerozoic and into the Anthropocene"	Mole Valley Geological Society, Dorking, UK
02.06 .2023	"The Anthropocene: a New Geological Epoch?"	Farnham Geological Society, UK

### **Simon Turner**

<b>Date</b>	<b>Conference/Meeting/TITLE</b>	<b>Organisation/Venue</b>
08.03. 23	Locating the Anthropocene: Markers, meaning, implications. <i>The Anthropocene Epoch in geological strata: detecting a "golden- spike" and the start of the Anthropocene" &amp; "Plastics as a marker for the Anthropocene"</i>	UCL Anthropocene, University College London, UK (online)
31.03. 2023	An Aesthetic Enquiry of the Anthropocene. " <i>Defining a golden spike for the stratigraphic Anthropocene</i> ".	British Academy Conference, Royal Society, London
16.06. 2023	1 <sup>st</sup> National Conference on Anthropocene Science ““Defining a golden spike for the stratigraphic Anthropocene”	Chinese Academy of Sciences, Xi'an, China
26.06. 2023	The Seventh Biennial Conference of East Asian Environmental History (EAEH2023). “ <i>A golden spike for the stratigraphic Anthropocene</i> ”.	Center for Anthropocene Studies/KAIST, Daejeon, Republic of Korea
17.09. 2023	XXI International Union for Quaternary Research (INQUA) Congress. “ <i>The Anthropocene as a tool for characterizing recent planetary change and predicting future environmental challenges</i> ”.	INQUA, Sapienza University, Rome, Italy
26.09 2023	Radionuclide distributions in (time-resolved) natural archives determined by AMS. Session A7.1 (Hain <i>et al.</i>	MIGRATION 2023, Nantes, France <a href="https://migration2023.sciencesconf.org/data/pages/Migration_2023_Program_v1_10_with_posters_print_version_10082023.pdf">https://migration2023.sciencesconf.org/data/pages/Migration_2023_Program_v1_10_with_posters_print_version_10082023.pdf</a>

## AWG in the MEDIA (i) (websites, internet news, radio)

A huge thanks for this lengthy list must go to Anna Maria Rilke from the Max Planck Institute in Berlin who, as a student assistant, was asked to follow media mentions of the AWG through 2023. Many members contributed to these items listed here. Specific contributions are also mentioned in the following section.

10.07.2023 Anthropocene No Longer Surprising with Uptick in GHG, Microplastics, PFAS – Expert Says, Nature World News, (USA), Rich Co

The announcement of the proposed location of Crawford Lake for the Anthropocene GSSP on July 11th, 2023, made international news and led to a very large number of media items online and in print around the world.

**THE TIMES**

**Men, you can wear (Barbie) pink now**

**Has humanity's handiwork pushed Earth into a new epoch?**

**Adam Vaughan Environment Editor**

The world has taken a significant step towards entering a new geological epoch defined by humanity's impact. A forest-fringed lake on the outskirts of Toronto was selected by geologists yesterday as the best place to show that the Anthropocene has begun. An epoch is one of the smaller geo-

logical units of time, ranging in length from thousands to tens of millions of years. Many experts believe that humanity's burning of coal, nuclear weapons testing, plastic pollution, use of concrete and fishing have altered the planet so much we now live in a new epoch. Earth has been in the Holocene epoch for about 12,000 years, a period with temperatures stable enough for civilisation to flourish. But this could make way for the Anthropocene which is believed to have started in the 1950s. Geologists selected Crawford Lake in Canada as the best location globally to mark the birthplace of the Anthropocene because the sediments preserved at the bottom hold a record of humanity's impact. The small lake — roughly the size of three football pitches and 24

metres deep — won several rounds of voting by 34 geologists from the Anthropocene Working Group (AWG). The team, made up of experts from around the world, chose Crawford from 12 potential sites, including a Japanese bay and an Australian coral reef. The announcement in Berlin is a significant step towards formally establishing a new epoch, the AWG said.

Colin Waters, the group's chairman from the University of Leicester, said evidence from across the sites "shows you that there is this very significant, very rapid change to the environment." The International Commission on Stratigraphy, the arbiter of geological units of time, is due to vote next year on whether to adopt the new epoch. [Lake reveals human impact, page 11](#)

# NEWS

**15-19<sup>th</sup> November 2023. IGGP 732 Language of the Anthropocene annual meeting in Xi'an, China.** Workshop 'The Anthropocene - Impacts and Sustainability of Earth System development'.

**Reinhold Leinfelder:** Production and publication of the Graphic Science Novel ""Taming Time - A Golden Spike for the Anthropocene" (by Alexandra Hamann, Reinhold Leinfelder & Maki Shimizu, with support by Jan Zalasiewicz, Colin W. Waters, Simon Turner and Mark Williams and others), based on the AWG studies and Reinhold Leinfelder's university lecture course "The Anthropocene Concept" (Freie Universität Berlin). Open Access, free download of eBook via <https://dx.doi.org/10.17169/refubium-40617>  
For more information see <https://tamingtime.de>

**Barbara Fiąlkiewicz-Kozięł** habilitation thesis "Geochemical record of human activity in selected Eurasian peat deposits as a tool to define the lower boundary of the Anthropocene"

**Agnieszka Gałuszka:** Introduction to Polish edition and reviewing translation of the book L'Anthropocène décodé pour les humains (Antropocen bez tajemnic) by Nathanaël Wallenhorst, translated by Dorota Ostrowska-Furmanek. Edu-Libri. ISBN: 978-83-66395-52-7.

## **Simon Turner – New Scientist 2023>2024**

Illustrative of the ongoing public perception of what and when is the Anthropocene, I have compiled here for the record a timeline of articles published in the New Scientist (UK) this year.

11.07.2023 'Canadian lake chosen to mark the start of the Anthropocene'.

<https://www.newscientist.com/article/2381867-canadian-lake-selected-as-site-to-mark-the-start-of-the-anthropocene/>, New Scientist, Chen Ly

06.09.2023 The proposed Anthropocene definition is unscientific and harmful

<https://www.newscientist.com/article/mg25934553-400-the-proposed-anthropocene-definition-is-unscientific-and-harmful/> New Scientist, Comment and Environment, Erle Ellis

20.09.2023 On the starting point for a new geological epoch (1)

<https://www.newscientist.com/letter/mg25934570-300-on-the-starting-point-for-a-new-geological-epoch-1/> New Scientist, Letters, Zalasiewicz, J., Head, M., Turner, S., Waters, C., & Williams, M.

20.09.2023 On the starting point for a new geological epoch (2)

<https://www.newscientist.com/letter/mg25934570-300-on-the-starting-point-for-a-new-geological-epoch-2/> New Scientist, Letters, Dave Smith

27.09.2023 Climate-trashing era began with white supremacists

<https://www.newscientist.com/letter/mg25934580-300-climate-trashing-era-began-with-white-supremacists/> New Scientist, Letters, Adrin Neatrour

01.11.2023 What to call the opening age of the Anthropocene

<https://www.newscientist.com/letter/mg26034632-400-what-to-call-the-opening-age-of-the-anthropocene/> New Scientist, Letters, Bryn Glover

22.11.2023 We may be at the beginning of The End  
<https://www.newscientist.com/letter/mg26034660-300-we-may-be-at-the-beginning-of-the-end/> New Scientist, Letters, Ian Elliott

26.12.2023 We might officially enter the Anthropocene epoch in 2024  
<https://www.newscientist.com/article/mg26034712-600-we-might-officially-enter-the-anthropocene-epoch-in-2024/> New Scientist, Earth, Chen Ly

24.01.2024 Is the Anthropocene far older than we thought?  
<https://www.newscientist.com/letter/mg26134750-300-is-the-anthropocene-far-older-than-we-thought/> New Scientist, Letters, William Hughes-Games

31.01.2024 Anthropocene stand does not reduce climate concern  
<https://www.newscientist.com/letter/mg26134760-300-anthropocene-stand-does-not-reduce-climate-concern/> New Scientist, Letters, Erle Ellis & Phil Gibbard

### **Davor Vidas**

Chair and co-organiser of the international conference on *Sea Level Rise and Its International Law Implications for Legal Certainty, Stability and Human Rights*, organised by the University of Bern, World Trade Institute, in cooperation with the Fridtjof Nansen Institute, held in Bern, Switzerland, 9 June 2023.

### **Michael Wagreich**

Érika Nesta Silva (Brazil) was for several months at Vienna University with an internship granted by FAPESP on the topic “Anthropogenic depositions in Vienna and Brazilian cities (Rondonópolis – MT and Presidente Prudente – SP): analytical possibilities and their correlations”.

Open Lecture series “Aspects of the Anthropocene”, hosted by the University of Vienna (March-June 2023), a cooperation of IGCP 732, the Vienna Anthropocene Network and the Forum Anthropocene. Lectures included a focus on food resources (R.Leinfelder), the impact of agriculture, environmental movements, SDGs, Arts and literature, the sediment cycle of the Anthropocene (Jaia Syvitski) and the formal definition process and progress of the Anthropocene (Simon Turner).

### **Scott Wing**

5<sup>th</sup> March 2024. Texas State University, San Marcos: “The dawn of an epoch: what the Eocene says about the Anthropocene”.

# **ANTHROPOCENE WORKING GROUP: PROGRAMME FOR 2024**

With submission of the proposal to SQS, and completion of the voting process, the AWG will stand down as an SQS working group and will have no official function as part of ICS. The last formal function is for several members of AWG to attend the 37<sup>th</sup> International Geological Congress 2024 in Busan, Korea from 25-31 August.

It is envisioned that many members will be keen to continue working together as a loose group investigating the evolving details of the Anthropocene as a concept that encapsulates overwhelming human impact on the geology and Earth System state of the planet. However, this will be the final official AWG Newsletter. From its inception as a working group in 2009, this has been an incredible journey from early exploration of Paul Crutzen's inspired improvisation of the term, through appreciation of the significance of the Great Acceleration championed by Will Steffen and to our current understanding based upon rigorous multi-proxy analysis across diverse environments. The series of newsletters records the vast number of publications, conference presentations and media interviews undertaken by AWG membership. Against significant pressures to the contrary, we have always aspired to ensure that our work has been made open to all see and comment upon, not the work of a closed group making decisions in isolation and without justification. We hope this will be some legacy!

Colin Waters (AWG Chair)

Simon Turner (AWG Secretary)

March 2024
